

What is claimed:

1. An apparatus for securing a small recreational vehicle to a bed of a towing vehicle, said apparatus comprising:

a mounting shaft securably positionable proximal to said bed of said towing vehicle;

5 a receiver operably attachable to said mounting shaft; and

a securing device attachable to said small recreational vehicle, said securing device securably engaging said receiver when said small recreational vehicle is placed on said bed of said towing vehicle, thereby holding said small recreational vehicle on said bed of said towing vehicle.

10 2. An apparatus as in claim 1, wherein said securing device comprises a securing ring.

3. An apparatus as in claim 2, wherein said receiver is adjustable along said mounting shaft to allow alignment with said securing ring.

4. An apparatus as in claim 2, wherein said receiver comprises a u-shaped bracket with parallel arms extending outward from said mounting shaft.

5. An apparatus as in claim 4, wherein said securing ring fits between said parallel arms of said u-shaped bracket.

6. An apparatus as in claim 5, wherein each of said parallel arms define an aperture therein and a fastening device is positionable through said apertures and said securing ring to secure said small recreational vehicle to said u-shaped bracket and said towing vehicle.

7. An apparatus as in claim 6, wherein said fastening device is a hitch pin.
8. An apparatus as in claim 2, wherein said securing ring is lockable to said receiver.
9. An apparatus as in claim 2, wherein said towing vehicle is a trailer.
10. An apparatus as in claim 9, wherein said mounting shaft is attachable to a tongue of said trailer.
11. An apparatus as in claim 2, wherein said mounting shaft defines a channel whereby said receiver is attachable inside said channel of said shaft.
12. An apparatus as in claim 2, wherein said securing ring is removably attachable to allow at different locations on said small recreational vehicle.
13. An apparatus as in claim 2, wherein said securing ring is mounted on a ring plate that is attachable to said small recreational vehicle.
14. An apparatus as in claim 13, wherein said ring plate is mountable to different parts of said small recreational vehicle.
15. An apparatus as in claim 13, wherein said ring plate is mountable to a bush guard of said small recreational vehicle by engaging a holding plate.
16. An apparatus as in claim 1, wherein said mounting shaft comprises a unitary structure.
17. An apparatus for securing a small recreational vehicle to a bed of a towing vehicle, said apparatus comprising:
  - a mounting shaft having a receiver disposed thereon, said mounting shaft securably positionable proximal to said bed of said towing vehicle; and

5           a securing ring attachable to said small recreational vehicle, said securing ring securably engaging said receiver to fasten said small recreational vehicle on said bed of said towing vehicle.

18.    An apparatus as in claim 17, wherein said towing vehicle is a trailer.

19.    An apparatus as in claim 18, wherein said mounting shaft is attachable to a tongue of a trailer.

20.    An apparatus as in claim 17, wherein said mounting shaft defines a channel whereby said receiver is attachable inside said channel of said shaft.

21.    An apparatus as in claim 17, wherein said receiver is integral with said mounting shaft.

22.    An apparatus as in claim 17, wherein said receiver is adjustable along said mounting shaft.

23.    An apparatus as in claim 17, wherein said mounting shaft comprises a unitary structure.

24.    An apparatus for securing a small recreational vehicle to a bed of a towing vehicle, said apparatus comprising:

          a receiver mounting plate securably mountable to a sidewall of said bed of said towing vehicle

5           a receiver disposed on said receiver mounting plate; and

          a securing device attachable to said small recreational vehicle, said securing device securably engaging said receiver to fasten said small recreational vehicle on said bed of said towing vehicle.

25. An apparatus as in claim 24, wherein said securing device comprises a  
10 securing ring.

26. An apparatus as in claim 25, wherein said receiver is adjustable along said  
receiver mounting plate.

27. An apparatus as in claim 26, further comprising locking walls disposed on  
said receiver mounting plate, said receiver adjustable along said locking walls.

28. An apparatus as in claim 25, wherein said receiver comprises a u-shaped  
bracket having parallel arms extending toward said bed of said towing vehicle.

29. An apparatus as in claim 28, wherein said securing ring fits between said  
parallel arms of said u-shaped bracket.

30. An apparatus as in claim 29, wherein each of said parallel arms define an  
aperture therein and a fastening device is positionable through said apertures and said  
securing ring to secure said small recreational vehicle to said u-shaped bracket and said  
towing vehicle.

31. An apparatus as in claim 30, wherein said fastening device is a hitch pin.

32. An apparatus as in claim 25, wherein said securing ring is lockable to said  
receiver.

33. An apparatus as in claim 24, wherein said towing vehicle is a trailer.

34. An apparatus as in claim 24, wherein said towing vehicle is a truck.

35. An apparatus for securing a small recreational vehicle to a bed of a towing  
vehicle, said apparatus comprising:

a mounting shaft extending a longitudinal length and having a first end and a  
second end at opposing ends of said longitudinal length;

5           a mounting base integral to said shaft at said first end, said mounting base  
attachable to a tongue of said towing vehicle by a holding plate so that said second end of  
said shaft extends above said bed of said towing vehicle;

          a U-shaped receiver operably attachable to said shaft by securing bolts, said u-  
shaped receiver having parallel arms extending outward from said shaft when said  
10 receiver is attached to said shaft and said receiver being adjustable along said shaft to  
accommodate small recreational vehicles of different heights;

          said parallel arms each defining a locking aperture which are in parallel alignment  
with each other;

          a securing ring attachable to said small recreational vehicle, said securing ring  
15 defining a ring aperture and fitting between said extending arms of said U-shaped  
receiver when said small recreational vehicle is placed on said bed of said towing vehicle,  
said securing ring extending past said apertures defined in said parallel arms so that said  
locking apertures and said ring aperture are aligned; and

          a removable fastening device positionable through both said locking apertures of  
20 said parallel arms and said ring apertures of said securing ring to hold said small  
recreational vehicle on said bed of said towing vehicle.

36.     An apparatus for securing a small recreational vehicle, said apparatus  
comprising:

          a unitary mounting shaft having a receiver disposed thereon, said mounting shaft  
securable to a grounding member; and

5           a securing ring attachable to said small recreational vehicle, said securing ring securably engaging said receiver, thereby fastening said small recreational vehicle to said grounding member.

37.     An apparatus as in claim 36, wherein said grounding member comprises a wall.

38.     An apparatus as in claim 36, wherein said grounding member comprises a driveway.

39.     An apparatus as in claim 36, wherein said receiver comprises a u-shaped bracket with parallel arms extending toward said bed of said towing vehicle.

40.     An apparatus as in claim 39, wherein said securing ring fits between said parallel arms of said u-shaped bracket.

41.     An apparatus as in claim 40, wherein each of said parallel arms define an aperture therein and a fastening device is positionable through said apertures and said securing ring to secure said small recreational vehicle to said u-shaped bracket and said towing vehicle.

42.     An apparatus as in claim 36, wherein said securing ring is lockable to said receiver.

43.     An apparatus as in claim 36, wherein said receiver is adjustable along said mounting shaft to allow alignment with said securing ring.

44.     An apparatus for securing a small recreational vehicle, said apparatus comprising:

          a receiver mounting plate securably mountable to a grounding member;

          a receiver disposed on said receiver mounting plate; and

5           a securing ring attachable to said small recreational vehicle, said securing ring securably engaging said receiver to fasten said small recreational vehicle to said grounding member.

45.     An apparatus as in claim 44, wherein said receiver is adjustable along said receiver mounting plate.

46.     An apparatus as in claim 45, further comprising locking walls disposed on said receiver mounting plate, said receiver adjustable along said locking walls.
